installed in new frame with new bearings. Cleaned up all threaded holes in the new frame due to them being full of paint. Installed new bushings in the frame. Installed frame into the unit, secured into place with pin and bearings. Measured and set frame centered in the combine frame with side bearings. While the auger trough housing was out, found wear holes starting at the top of the tailings rethresher on both sides. Welded up holes while the housing was out and easy to get to. Installed auger trough housing and installed tailings augers back into housing. Siliconed any gaps between housings. Installed clean grain auger back into position with new bearings. Installed trough extension shields and re-connected clean grain chain. Installed lower and upper shoe frames. Found some cracks on the upper frame, welded them up before installing the frame. Installed eccentric arms and centered frames. Connected grain pan to the upper frame. Installed fan and fan housing. Installed fan drive pulleys and belt. Installed top, bottom and pre-sieve. Had to move unit bay in the shop to make way for other jobs. Installed chopper housing, brackets and shields. Ran unit and checked operation. Calibrated top, bottom sieves and self-leveling shoe actuator. Installed header back onto unit.
